

FORTA Corporation is a multidivisional manufacturer known around the world for its leading influence in concrete and asphalt reinforcement. Since FORTA®'s beginning in 1978, its fibers have played an important role in the design and construction of many different types of projects.

From a single grade of fiber, FORTA® has expanded its product line to include an entire family of fibers uniquely tailored to a variety of applications. From monofilament to fibrillated, micro to macro, FORTA Corporation became the world leader of the concrete fiber reinforcement industry.

And in its unyielding quest to innovate and develop synthetic fiber solutions to address all customer needs, FORTA Corporation then developed a fiber for asphalt pavements - resulting in tougher, more durable asphalt on highways, airports, and parking lots. After years of research and development, FORTA-FI® is now known as the leader in fiber reinforcement technology for asphalt.

FORTA Corporation is not just a producer. From the lab to the jobsite, they are there to support owners, engineers, and contractors every step of the way. They know the problems their customers face and strive to be the solution! FORTA Corporation continues to grow and develop with the customer in mind, just as they have done since 1978.
